These figures are derived from the direct voting of the members of the State Council on Libraries and Literacy. Individual grants are scored and each Council member assigns a numerical value to the grant. Each grant total is then divided by the number of reviewers who voted on the project. This produces the **Final Score**. Note: some abstentions were recorded during the voting process and factored into the scoring.

These rankings are from the review meeting held on January 15-16, 2013. The rankings are provided to the State Library Administrator. Actual awards are made once the U.S. Congress finalizes the budget and the state allotments are determined by the Federal Office of Management and Budget (OMB).
