The activity
Pre-elementary age children are able to play simple matching and sorting games. The game helps children understand the rule for sorting (by shape, color, size, etc.), hold the rule in mind, and follow it.

For older toddlers, you can add a twist to a sorting game, such as putting small shapes in a big bucket and big shapes in a small bucket. Children tend to put like with like, so a change is challenging, requiring them to inhibit the expected action and engage their selective attention and working memory.

Set up
Print the piggy bank page. Try printing a few copies and brainstorm for different ways to sort coins. Write the description of the coins to be sorted underneath the piggy bank picture. For example, on one piggy bank page you might put the values of the coins: 1¢, 5¢, 10¢, 25¢. Then, on a new piggy bank page, you might write sizes: smallest, next smallest, next smallest, largest. Then, on a new page, you might write colors: copper, silver with ridges, silver with no ridges.

Things to talk about
Money is an object we use to buy things. Money can be printed bills or minted coins.

- Money has not always looked like it does today. Long ago, people traded items like shells, beads, or pieces of metal for things they wanted.
- Today, the U.S. Mint makes coins, and the U.S. Bureau of Engraving and Printing produces U.S. currency notes. Money eventually travels to banks around the country for people to use.
- Money looks different in different places around the world.
- When we buy things online, we’re using money—even though we can’t see or touch it.

What to do
Use the coins you have on hand, and let your child sort them into categories. U.S. coins can be sorted in many ways: value, color, size, year, design, and more.

Once you and your child have the piggy bank pages ready, ask your child to sort the coins according to the labels on each piggy bank. You and your child can take turns sorting the coins.

Listen to your child explain his or her thinking—working through the exercise and getting each coin sorted into place is more important than getting the “right” answer every time.

For older children, you might explore the different ways coins add up. You might try to find combinations of coins that add up to 25¢, 50¢, or $1.00.
Money sort

Place coins into their appropriate piggy bank.
